

VILAMOURA CHALETS

PROJECT: VILAMOURA CHALETS

LOCATION: ALGARVE . PORTUGAL

YEAR : 2001

The Jordan family, whose company has developed top quality constructions in Portugal, commissioned the project of 60 homes within the Pinhal Velho development and golf course, in a privileged landscape.

Three types of houses were constructed, lots between 4,305 and 6,458 sqft lots and between 43,055 and 53,819 sqft. The program includes a living area, indoor and outdoor dining area, four en suite bedrooms, master bedroom, service area, gym, pool and parking lot.

In all the houses, an outspread design over the site was adopted and for the first floor or middle levels according to the topography of each lot.

From the hall, a large corridor was planned that organizes the different indoor and outdoor areas, which are alternated with intermediate courtyards and gardens.

Estudio BC also designed the common areas of the development and how the lots were delimited, using irregular perimeter fencing.

The project was subject to regulations requiring some pitched roofs with tiles and other flat roofs. This was used as a resource in the structure of the houses, working with pitched roofs with wooden structures over the living areas, library and dining room. The flat roofs were designed at different heights. The stone walls and floors and textured plaster in warm tones are prominent features.
